How may I help you?

We provide a wide range of healthcare services for you and your whole family, from infants to the elderly. Please feel free to consult us if you experience worrisome symptoms such as fever, cough, stomachache, nausea, diarrhea, palpitations, dizziness, back pain, rashes, etc.

With the exception of health checkups and some vaccinations, appointments are not required. We are sorry that we don't accept credit cards for your payment.

Is this your first visit?

Please show your health insurance card to the receptionist, fill out the medical questionnaire, and wait in the lobby until you are called. Once in an examination room, Dr. Wachi will respond to any questions you may have in English and provide you with the best treatment. After the consultation, please receive your prescription and patient ID card at the reception area and visit the nearby pharmacy (four doors to your left) where your prescription can be filled. Please note that all prescriptions are only valid for four days.

Pediatrics & Internal Medicine

For children and adolescents, we focus on epidemic infectious diseases; for middle-aged and elderly people we pay particularly close attention to lifestyle-related diseases (metabolic syndrome), early detection of cancer, and preventative health maintenance. Metabolic syndrome caused by visceral fat obesity refers to a cluster of conditions such as hypertension, hyperglycemia, and hyperlipidemia, and that may increase your risk of heart disease, stroke, and diabetes.

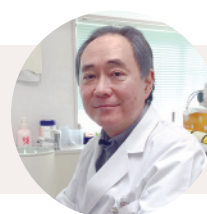

Our primary care services are used to treat and manage patients with cardiovascular diseases (hypertension, angina pectoris, arrhythmia, heart failure, etc.), digestive disorders (gastroduodenal ulcers, reflux esophagitis, irritable bowel syndrome, hepatobiliary diseases, etc.), respiratory problems (respiratory tract infections, tobacco-related disease, cough variant asthma, atopic cough, etc.), allergic reactions, and a range of other illnesses.

In cases where emergency or advanced medical care is required, we are ready to refer patients to specialists at major regional hospitals.

Pain Clinic

Pain clinic focuses on the diagnosis and management of patients with chronic pain, which can affect an individual's energy and quality of life. Dr. Wachi provides personalized advice and treatments for a variety of pain disorders, such as those caused by nerve injuries, migraines, disc herniation, musculoskeletal disorders, and pain-related illnesses that accompany other conditions such as cancer or arteriosclerosis. Dr. Wachi also consults patients with certain neuropathies, such as facial nerve palsy and sudden deafness.

Home Medical Care

At times, elderly patients are unable to visit our clinic due to transportation or mobility-related issues. For these patients, we provide comprehensive home medical care with scheduled house visits by Dr. Wachi. Furthermore, our services are fully integrated with public care insurance services that offer nursing care, home health, and therapist-guided rehabilitation services. These comprehensive home medical care services provide comfort while reassuring our elderly patients, even those managing chronic conditions, that they will be able to continue residing at home for as long as possible.
